

95% of Four.meme launches are rugs.

~1,000 new tokens launch every day. No pre-trade DD tool exists — by the time rug analytics catch up, the LP is gone and the degens are poorer.

*"You've seen this movie. Fresh launch drops in the TG group, everyone apes, 20 minutes later the dev dumps. Every day. Today's tools tell you who rugged *yesterday*. We want to tell you who's about to rug, *right now*."*

Five AI agents. Live debate. **Verdict on-chain.**

Five specialised Claudes pull disjoint data slices, argue, and converge on a 0-100 risk score. The full debate pins to IPFS; an ERC-721 certificate mints on-chain — the NFT is the receipt.

Contract Auditor

Bytecode + honeypot + proxy analysis

Liquidity Analyst

LP depth, lock status, rug math

Dev Stalker

Deployer history, funding trail, Tornado links

Sentiment Watcher

Social signal + bot-likeness

Meta Matcher

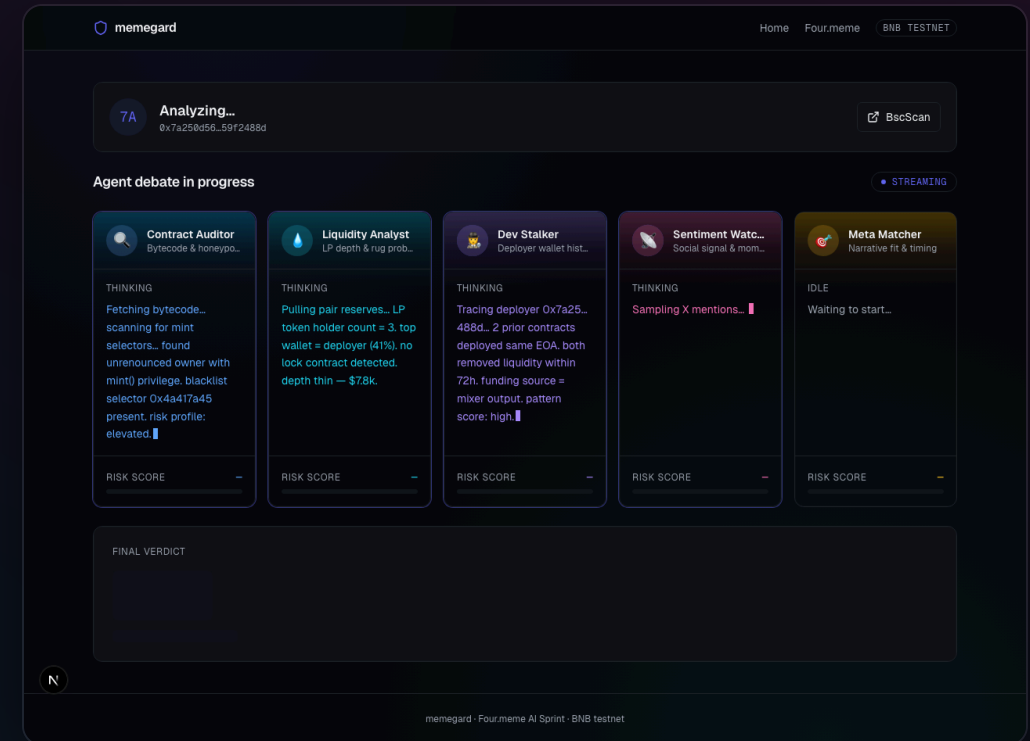

Narrative fit + originality

"Five disjoint data sources, disjoint failure modes. The disagreement itself becomes part of the signal — the whole debate is auditable forever."

Paste → stream → verdict → mint → tweet.

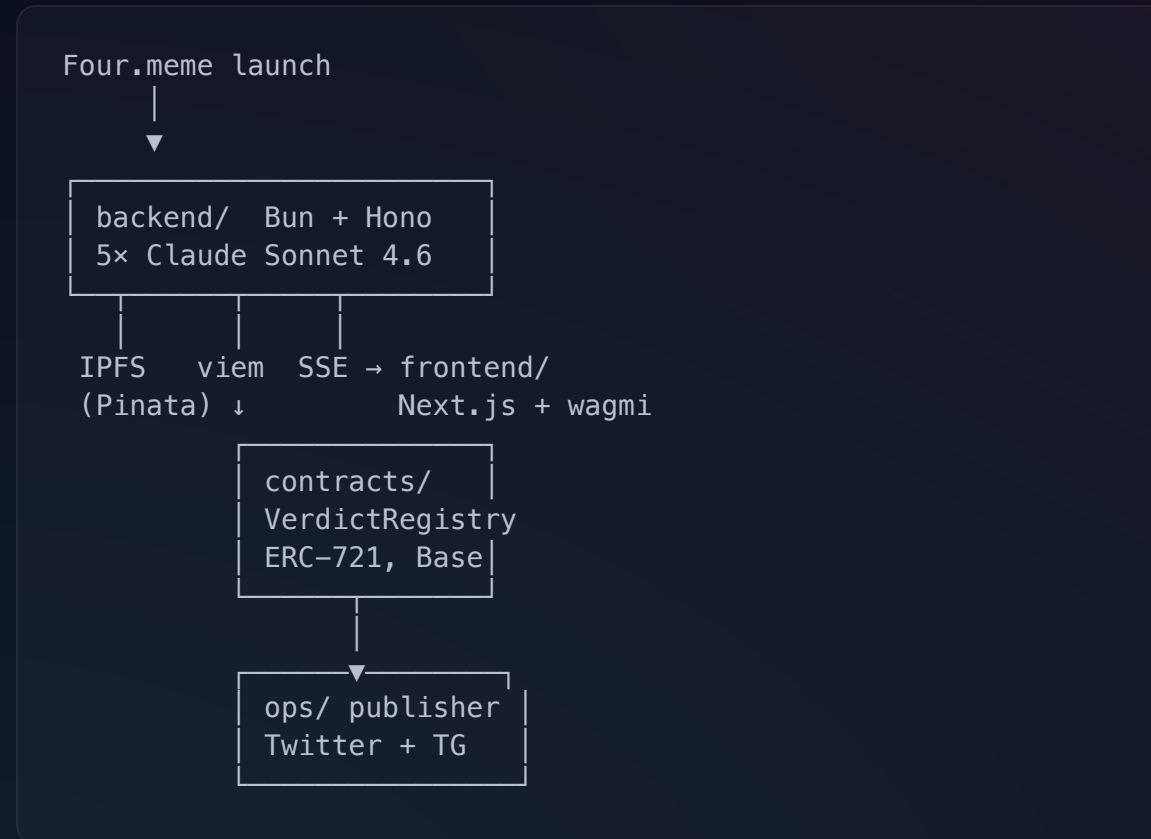

- Paste any Four.meme contract address
- Watch five agents stream reasoning live via SSE
- Risk score + tier badge converge in ~10 s
- Debate transcript pins to IPFS instantly
- Verdict NFT mints on Base Sepolia (BNB Chapel = one env swap)
- Twitter + Telegram fan-out within one poll tick

Live demo → localhost:3000 · Video → ops/demo.mp4

"Paste CA — watch the five agents stream in parallel — verdict HIGH_RISK, score 78 — NFT minted, tweet posted. All in under a minute."

Clean, composable, open.

- Foundry + Solidity 0.8.24 + OpenZeppelin
- Bun workspace, 3 services + ops tooling
- Claude Sonnet 4.6 via Anthropic SDK, streaming
- viem for on-chain writes, Base Sepolia (84532); chain env-driven
- Pinata for IPFS, cursor-based publisher polling
- MIT-licensed, four-worker monorepo

First multi-agent on-chain DD. Viral by default.

- **Novel** — nobody has shipped multi-agent DD with on-chain permanence
- **Composable** — the verdict NFT is a primitive; wallets, DEX screeners, TG bots can all consume it
- **Viral** — every verdict auto-posts to Twitter + Telegram with one-tap share
- **Built for Four.meme's audience** — README shipped Day 1, Chinese Telegram channel live
